

Q-2.3 Indiana NG9-1-1 Report
for the reporting interval ending
May 31, 2018
with data from

section A – INdigital ESiNet overview

1. There are no significant changes to report for the G-15 prime ESiNet. All services are deployed with IP based redundancy in all counties.
 - a. We are not aware of any progress with the AT&T ESiNet. All of our testing is complete.
 - b. There is no due date for the transition of 9-1-1 calls.
2. Work continues with Parke county for new CPE, is advancing to which may be completed in Q-2.
3. Miami County completed the installation of new call processing equipment from Motorola's ECW division. There are no issues to report.
4. Work continues to turn up the new network to network interfaces (NNI) with IOT. No issues are forecasted for this work.

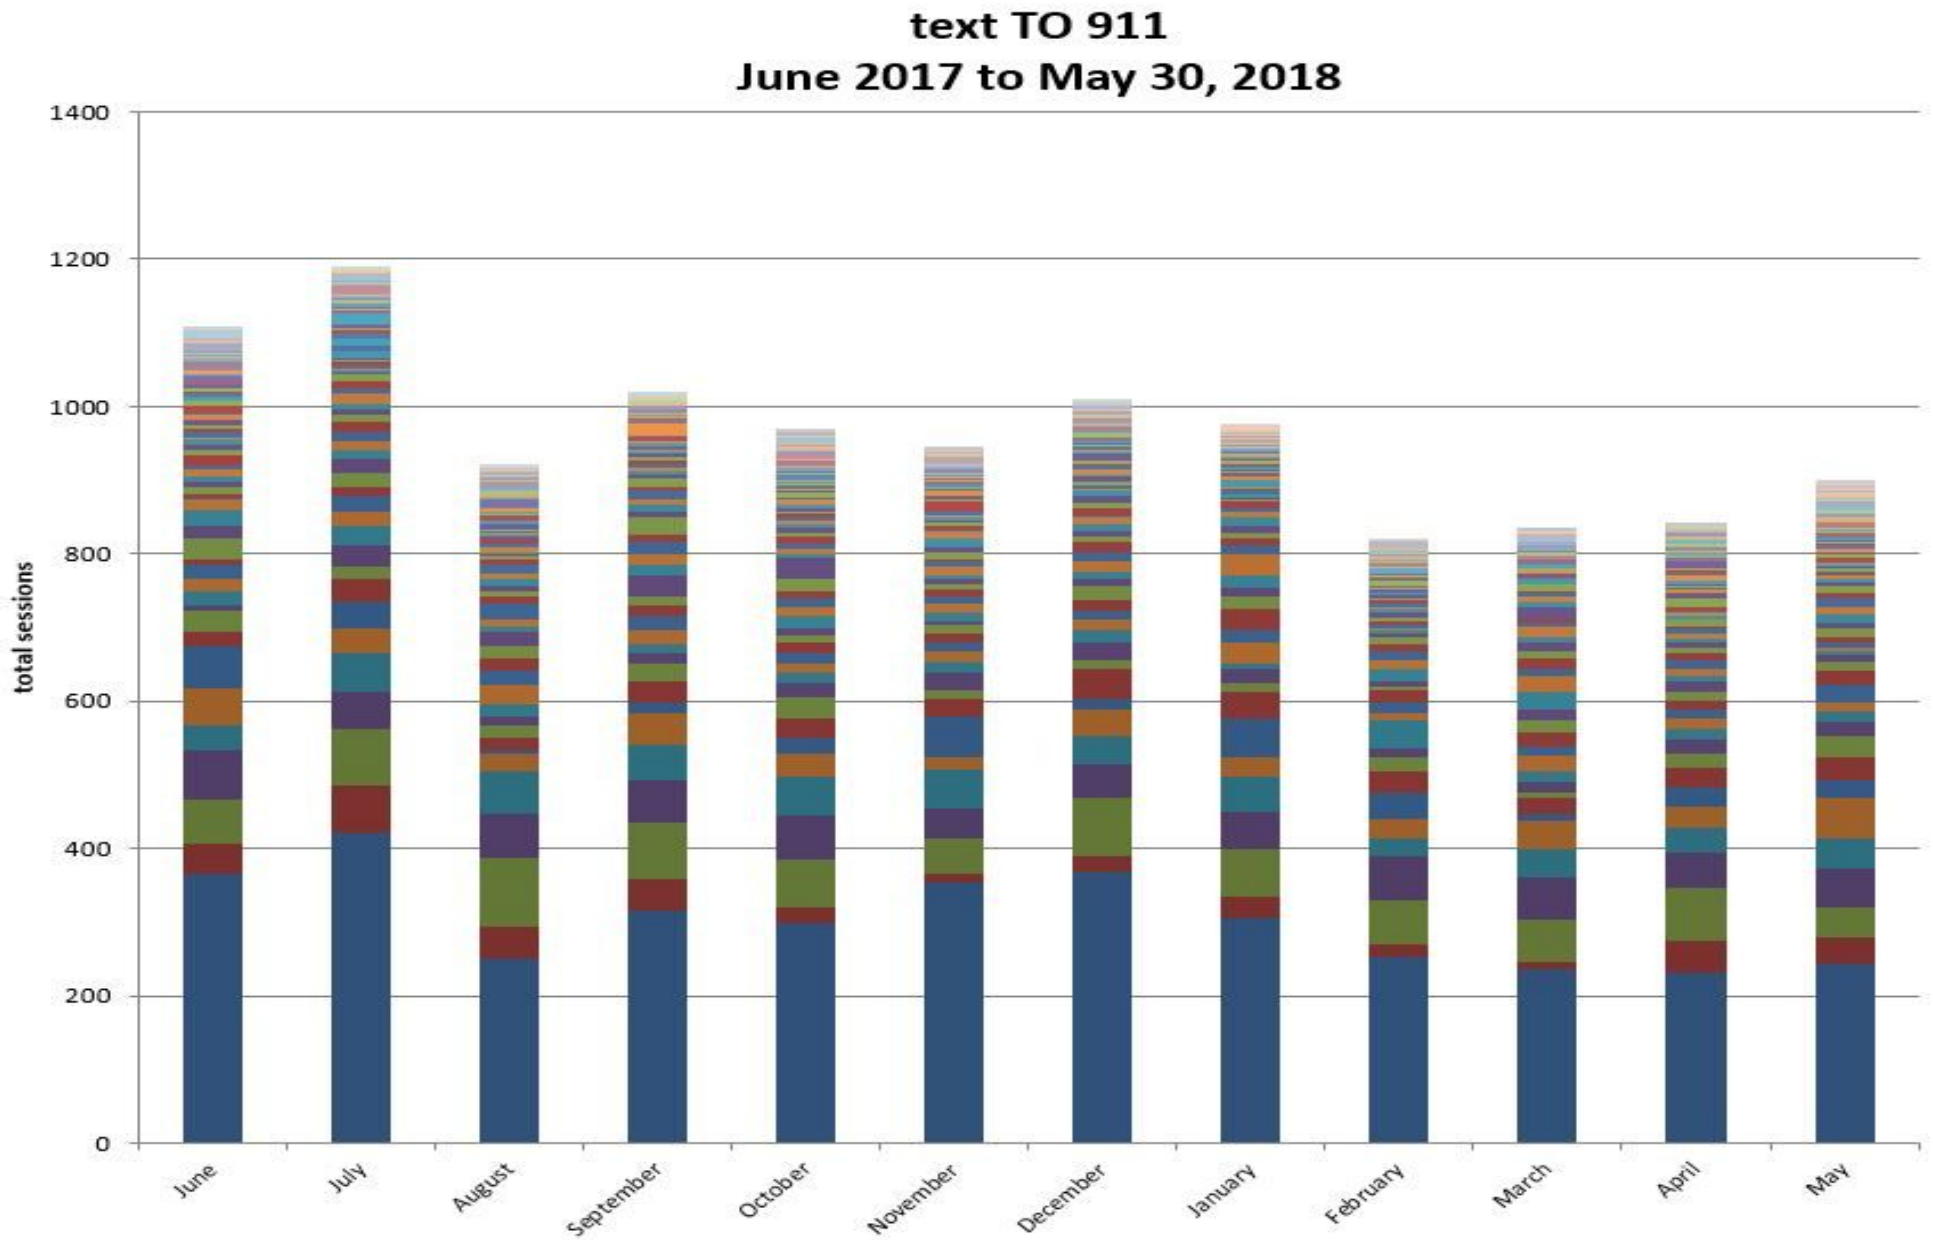

(this column is intentionally blank)

section B – INdigital prime ESiNet trends

5. There are no issues to report for any of the ISP posts.

6. Text [TO](#) 911 usage charts **by month**. The **YTD cumulative** heatmap matrix is on the next page.

7. Text **TO 911 YTD cumulative**

heat map matrix

9. Text FROM 911 charts by month

10. **Translation services** - Our analysts prepared the following chart of language line usage.

Usage is within the normal range, with seasonal variation.

section C - network quality

11. **G-15 network status** - There are no issues to report.
12. **Wireless carrier status** – There are no issues to report.
13. **Wireline carrier status** - There are no issues to report.
14. **Adjacent state connectivity** – INdigital will be upgrading our intercompany ESiNet connection with Cincinnati Bell related to the certain service changes they are making to their ESiNet. There are no other issues to report.
15. **Regulatory / Legislative matters** - Indiana Senate Bill 67 passed, but did not get a committee hearing in the house. (The legislation was a county / city revenue sharing initiative.)
16. **Inter-agency agreements** – There are no issues to report.
17. **ecAts** - There are no issues to report.

18. **Texty network** - We relaunched the release 17 of the Texty platform in early April. This updated release includes several new features, including transfer/conference.

This was the first 'under load' test of the platform, and we have identified some software deficiencies that are being corrected.

Additionally, the one-time-password provider (Symantec) has made a number of changes to their network and price structure.

These changes have brought about the need to update this security provision to another provider before we complete the rollout of Texty R-17.3

Additionally, we are working with West and Comtech for certain other connectivity updates to the Texty platform to make it more redundant.

There are no other Texty issues to report.

19. **Other stakeholders** - There are no issues to report.

section D - trouble ticket analysis

20. **Trouble ticket summary** – There are no unusual trends to report. The following graphs show the ticket breakdown by category.

All help desk functions are within expected ranges for all categories. 45% of the tickets are for the support of PSAPs on various matters.

There are no unusual trends to report.

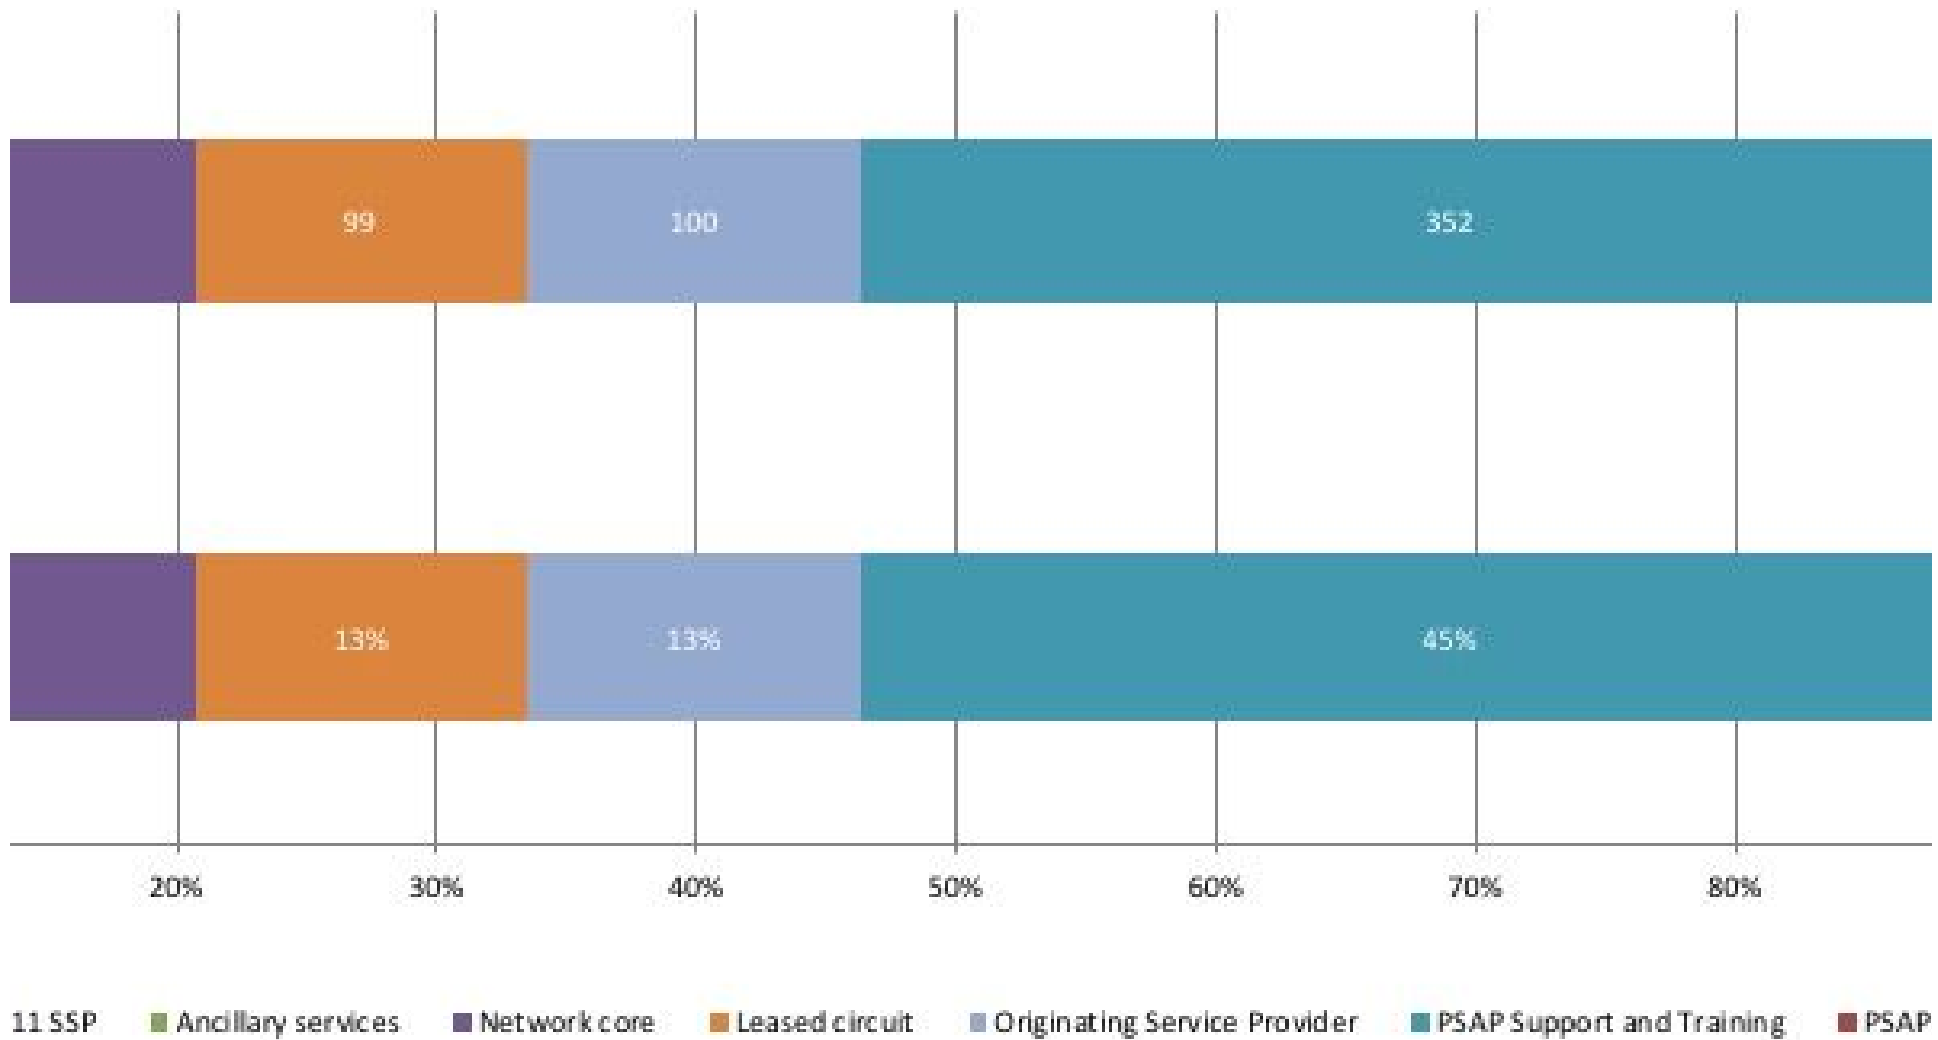

(the remainder of this column is intentionally blank.)

IN911 Wireless Network Trouble Tickets

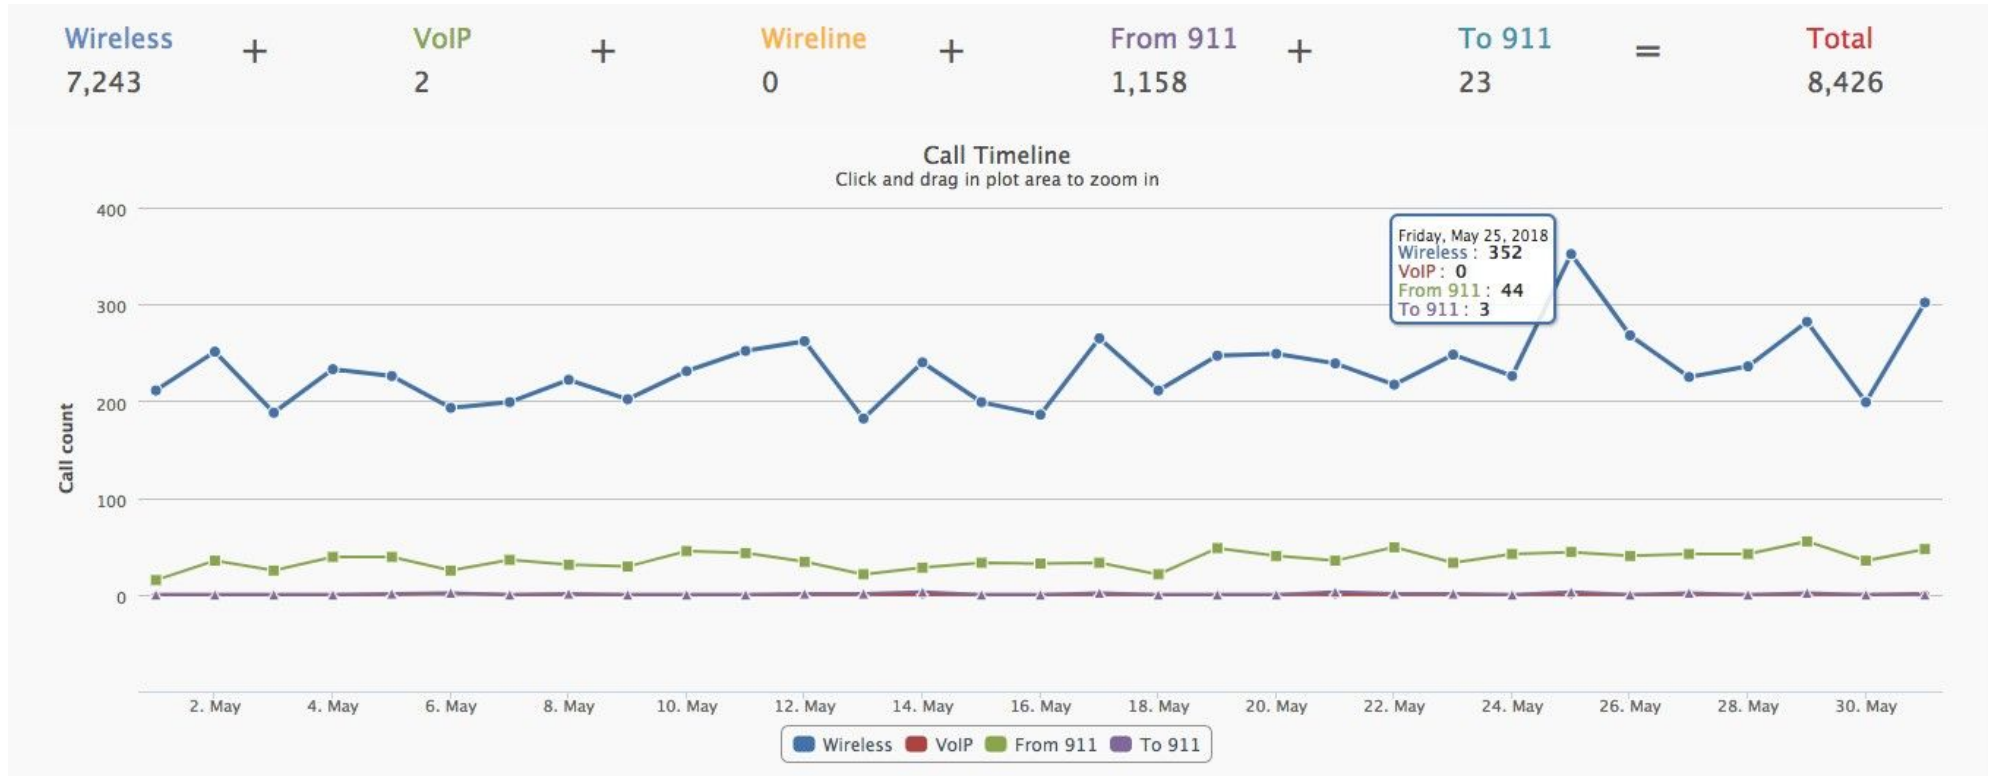

12 months through May 2018 Category and Source

IN911 Wireless Network Trouble Tickets 12 months through May 2018 by Functional Domain

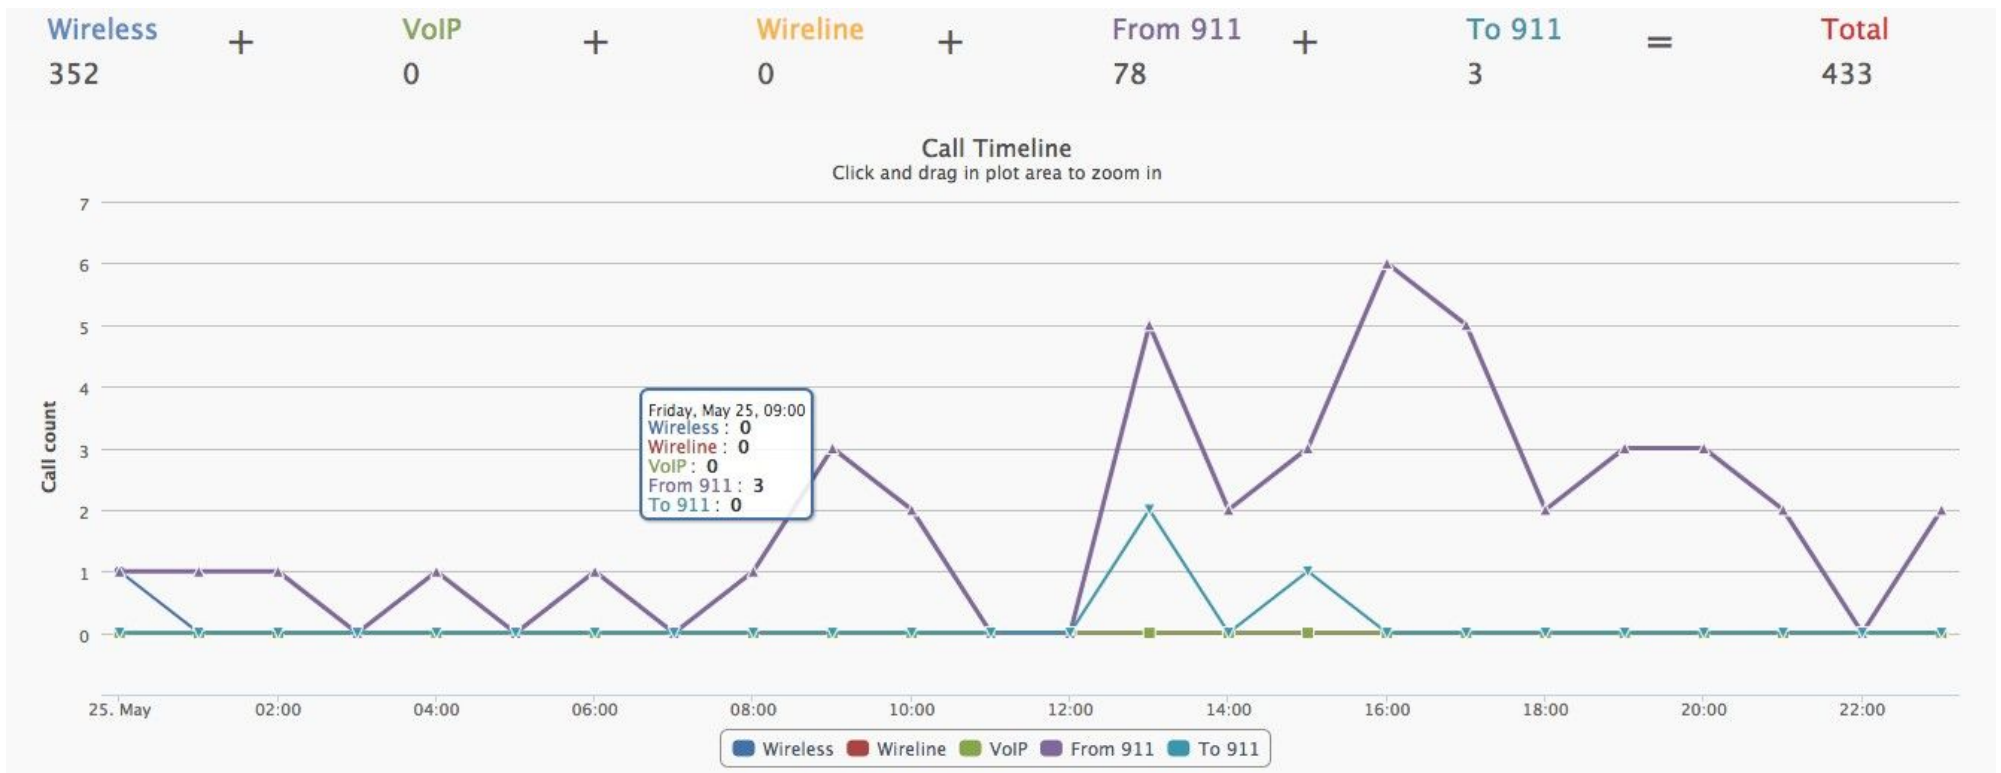

21. Voice session stats are highlighted during the recent Noblesville incident.

22. This is the Texty graph for that day, not including wireless calls. It shows a small spike in text messaging. (INDigital uses UCT for all logging.)

By content, one was from a teacher, one unknown from the middle school, and one student from the high school wanting to know what was going on.

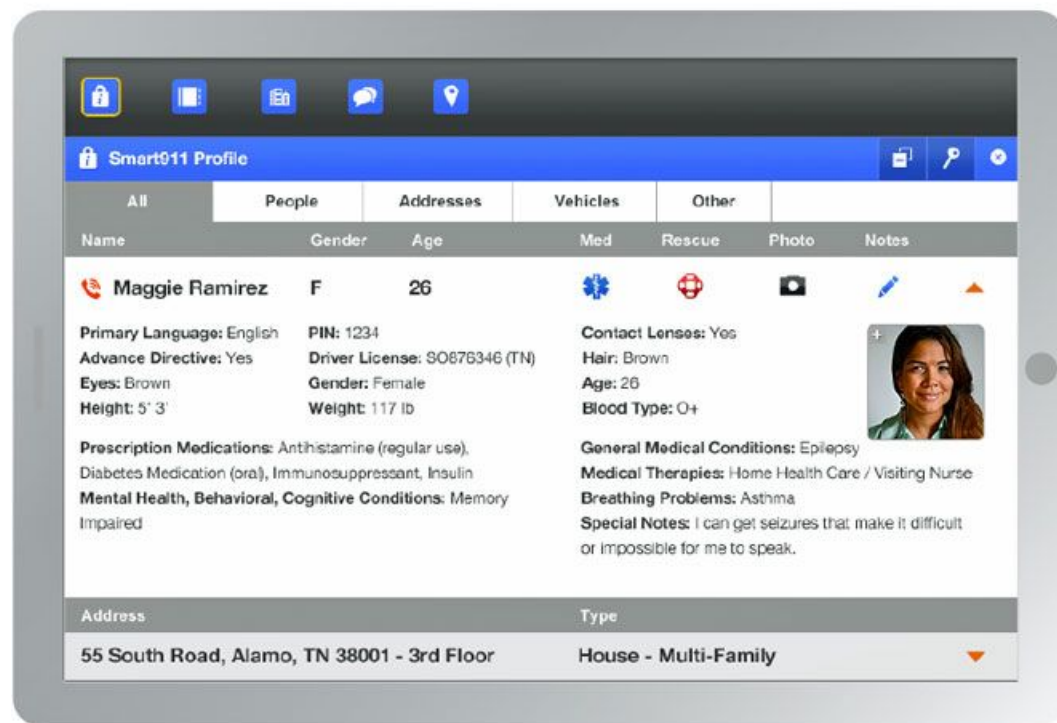

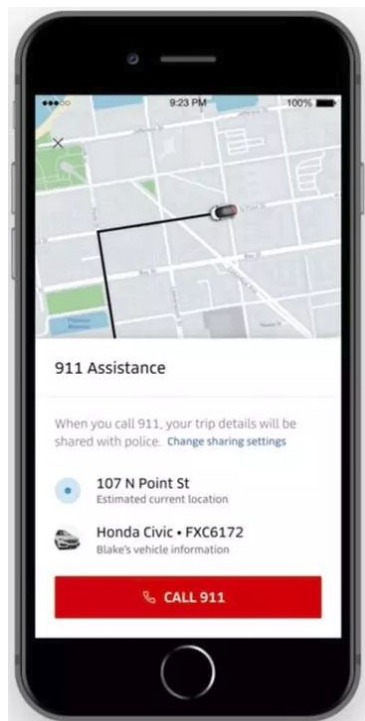

Section F - Update on new work

23. As we previously reported, INdigital has continued to work with RapidSOS to improve location accuracy. This work continues with additional testing for quality assurance.

Recently Uber, RapidSOS and Rave public safety (Smart 911) have announced a joint effort to provide improved safety to Uber users. The service is a breakthrough for certain conditions:

- A. The Uber rider must be in an active ride share, and trigger a handset based call to 9-1-1. (The feature does not yet support text messaging.) The app is shown below.
- B. The call has regular routing to the appropriate PSAP, and receives Phase II ANI caller location data.
- C. If the PSAP has a paid subscription to Rave Public Safety's Smart 9-1-1 service, an additional tab is presented to the call taker during the call. This provides a civil address and the Uber driver and car information.
 - a. The caller does not need to speak during the 9-1-1 call.
- D. There is no cost to the public to provide this service.

Rave holds several patents on these methods, which are now defined by NENA additional data standards.

INdigital plans to discuss SEP (standard essential patent) licensing with Rave to permit the Uber data to be displayed on existing ALI systems at the PSAP.

The Counties of Boone, Dearborn, Hancock, Kosciusko, Lake, City of Muncie, Monroe, Porter, Vigo, City of Zionsville have Smart911 today.

More updates to follow...
